World Forest Observatory Proposals 2010-11

A Scientific Community Collaborating to Use a New Global Instrument

World Forest Observatory Structure

Roles and Partners

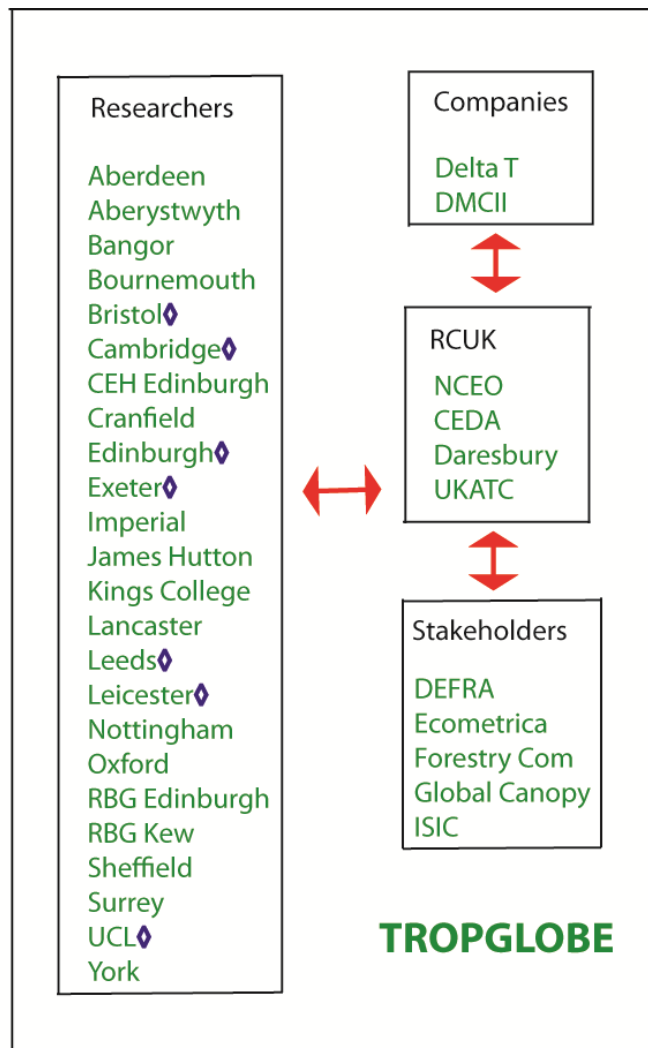

Role	Partners
Regional monitoring centres	Columbia U, U Jena, Keio U, Peking U, S Dakota State U, VTT, Woods Hole RC, Conabio
Carbon	Woods Hole RC, IIASA, Carnegie I
Biodiversity	UNEP WCMC, Smithsonian
Global hub & synthesis	U Leeds, Smithsonian
In situ	Smithsonian, U Leeds
Networking	U Helsinki, IIASA
Validation	Columbia U, Wageningen U
Verification	Resources for Future, IIASA, Wageningen

(Congo)

Maps of Other
Attributes from
Other Partners

1.8 billion hectares

400 billion trees

Attributes: area, location, carbon density, species

**Functions: combine information from 100s of sources
overlay information on different attributes**

Managing Tropical Forest Information and Astronomical Data

200 billion stars in the Milky Way

Attributes: location

**Functions: combine information from 100s of sources
overlay information on different attributes**

How a Pan-Tropical Forest Observatory Will Work

**The Third Lens:
Virtual Superimposition**

Parts of a VO

- All databases listed in Registries, or 'Yellow Pages'
- Databases selected via their Metadata
- Data grabbed from selected database using Grabbing Services
- Data analysed using Manipulation Tools
- Depends on:
 - Agreed standards
 - Services and applications which understand VO rules
 - Middleware which glues everything together

The iceberg

Prototype ASTROTROP Software

	Astrogrid	ASTROTROP
Data models	Obscore	Worldfile GIS metadata
Standards bodies (Existing)	IVOA	Open Geospatial Consortium
Registries	Registry	CKAN – Comprehensive Knowledge Archive Network Or GEONODES
Data Grabbing Services	SIAP	Geoserver
Data Manipulation Tools	Aladin	QGIS

Applications

- **Virtual World Forest Observatory** in which:
 - Users all over the world access multiple attribute data **and** multi-sensor data (e.g. Landsat, LIDAR etc.)
 - BUT data stay in their host databases
 - Local people can validate maps
- **Combine Spatially Decentralized Databases**
 - National forest inventories by provinces in large countries
 - Citizen observatories in hundreds of towns etc.
- **Combine Multiple Databases in Large Groups**
 - International research projects
 - Research councils
 - Mapping organizations

Next Steps

- Demonstrate prototype virtual observatory at February Conference
- Agree on initial standards at Conference
 - Metadata
 - Table formats
- Establish Working Group to agree on further standards over time

IVOA Standards Working Groups

Working Group	Standards for
Applications	Rules for data manipulation tools
Data Model	Metadata list format
Data Access Layer	Table Access Protocol, Search, Grab
Registries	Formats for registry listings
Grid and Web Services	Using VO Space
Semantics	Terms and ontologies
