## FAO - SEPAL

### System for Earth Observation Data Access, Processing and Analysis for Land Monitoring

Erik Lindquist

Daniel Wiell

Mino Togna

Yelena Finegold

Andreas Vollrath

Roberto Fontanarosa

Esther Phillips

### Collaborators

- Government of Norway
- KSAT
- AMA
- USGS
- European Commission
- Google
- many others...

### **SEPAL Objectives**

Improve data access and delivery of (pre)processed satellite data and forest information products to enable developing countries to build the autonomous capacity to monitor their forest-related REDD+ activities.

# Bring the data

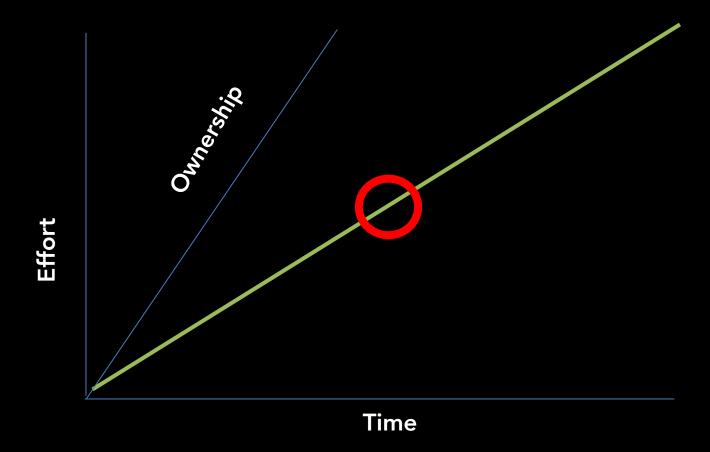

(and algorithms, software and recipes)

# to the people

I hear and I forget

I see and I remember

## Ido...and Lunderstand

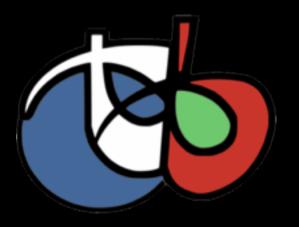

### What is it?

- SEPAL is a cloud-based platform for autonomous land monitoring - a catalyst
- Open source
- Easy query, access and processing of earth observation data
- Expandable with user scripts
- A 'barrier buster': Analysis Ready Data,
  Supercomputing power, Maintenance and Dependencies

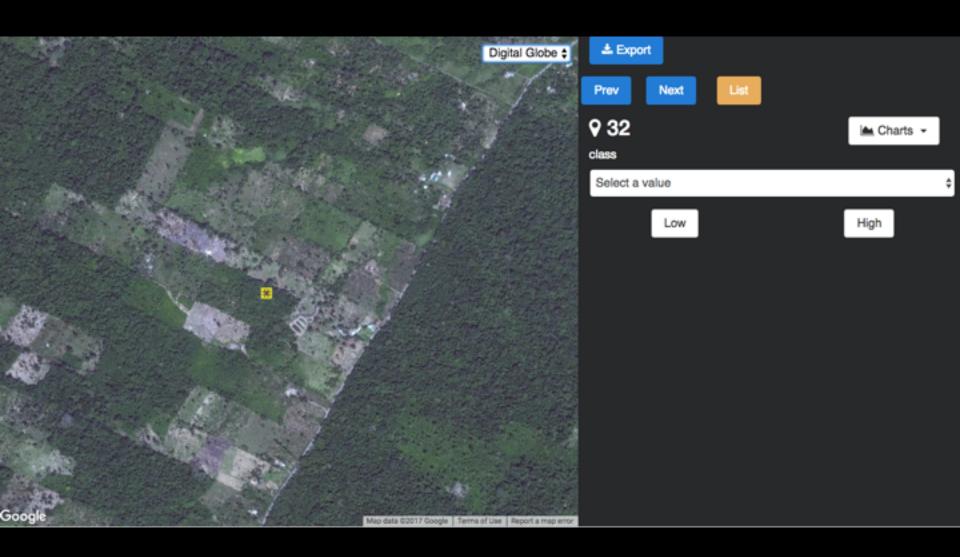

- Create composites / mosaics of Landsat and Sentinel
- Process RADAR data
- Classification and change detection
- Image segmentation
- Time-series analysis
- Sample-based area estimation
- Compliant with GFOI Methods and Guidance

## Planet integration for Reference Data

## DG integration for Reference Data

### **SEPAL Conclusion**

- Improve connection between data / users / information products for REDD+
- Increase production speed of products required for MRV
- Open, flexible system for rapid and standardized image processing
- Building national capacity for autonomous creation of national statistics
